How to use NetTutor for online tutoring

If you would like to use NetTutor to get help with one of your classes, here is how you can access it.

Start by going into Canvas. Choose a course and go into that course shell.

From your selected course, choose NetTutor from the links on the left-hand side.

Once you click the link, a new screen will pop up that will direct you to choose a category of class to receive tutoring in. Scroll through the list and choose the most appropriate class grouping.

You will be directed to a screen that gives you several options.

If live tutoring is not available when you click, check the drop in tutoring hours to see when tutoring will be available. You can also upload papers for feedback or drop off questions that will be answered at a later time. For more information on NetTutor, visit the BC tutoring site.
