Other Ethnicity	50.0%	47.8%	41.7%	46.9%	51.3%	

Transfer Velocity is a six-year transfer rate derived from the CA Community College Chancellor's Office Transfer Cohort project. The project tracks first-time students to determine if they show "behavioral intent to transfer". Intent to transfer is determined when a student completes 12 units and attempts transfer-level Math or English within a six-year period. In the table, percentages shown in grey are from groups of fewer than 30 where overall results are more influenced by individual results.

The table displays the percentage of students who successfully transferred within each demographic category, while the graphics below illustrate the demographic profile of the students who successfully transferred in the 2010-11 to 2015-16 cohort. For example, 64.9% of all students who successfully transferred in the 2010-11 to 2015-16 cohort were female, but of all females in the 2010-11 to 2015-16 cohort, 33.2% successfully transferred within the time period .
